Think of the **TouchDesigner** community as both a friend and an enemy. As a friend, push each other to improve and build on what you've learned from each other. As an enemy, don't forget that you too are a member of the community, and you too have a voice. I also found myself using some of the other tools (adjustment panels, adjustment brushes, layers, and masks)–in addition to the workflow features and the powerful AI tools–far more frequently. And while a few peeks are in order, I'm confident with one hand on the wheel that the Photoshop has gotten better. The new, AI-driven Photoshop is the best in the industry. my job - free time Photoshop. Photographers are used to the fact that Photoshop was originally for print - and a few owned Macs for it. They know a fatal mistake on a print is a second or third try :)

the new Photoshop? I spent about a few minutes wandering around in my Lightroom. checked the DNGs from the shoot and proceeded to discover that Lightroom 5.2 with the new smarts seemed to get better handling of the camera curves. Handling smaller and smaller details is much better. I understand that a major reason for the new version of Photoshop is to

make expensive machines obsolete. so: it is quite fast indeed. when does it take me a second to clean the red eye? too bad. and there I can find and fix the crop. but otherwise i don't find the slightly o.s. blending modes and automatic crop much faster.

The new version of Photoshop is part of Adobe's Creative Cloud, as well as Elements, but also some other apps. it is the best version yet. the cross-op. has improved in quality and speed. the AI editing is way faster. it doesn't take time and patience. it is exactly what we want from a print editing solution.

i am using CC (not current CC - after all, there are lots of subscribers, too) on a Macbook, and an iMac - and it is as fast as a PC. congratulations to Adobe!

in addition the AI seemed to become more and more intelligent, some time after release. And the story of the new version of photoshop seems to be that intelligent AI are indeed helping us to create output with the right look even faster. so, yes, I am very happy with the new photoshop and well satisfied with the new creative cloud.

one question remains: does the new Photoshop allow me to export a picture set, say, DNGs only with an updated version number? Or is it only possible to merge files, something so complex that one can only use a recent photoshop?

what a great product and what great support! thank you! and congratulations to your teams. And after a hectic week: don't forget to slow down a little. Enjoy the new photoshop - and my thanks to Adobe for creating such a brilliant tool...

Intuitive 3D imaging workflow features are built in to Photoshop, such as lens correction for manual removal of chromatic aberration, automatic detection of 3D objects, and the ability to create and transform scenes in Adobe 3D. Among the many workflow advantages in Photoshop, the new, intuitive 3D features make it easier to edit 3D content and transfer content from 3DS Max and Maya. Photoshop will include both two-pass and single-pass/auto-alternate render settings. Photoshop offers better speed and quality for 3D scenes, and new auto texture mapping algorithms improve the quality of 3D texture animations. Photoshop also features a single artist board that lets users share textures, reference materials and resources, and measure and critically review various edits. The new Adobe Experience Analyzer (beta) measures performance across multiple desktop and mobile devices. It provides a comprehensive performance metric of the Photoshop application, and granular analysis of device features, performance settings and usage. Performance states are supported through editable device profile, leveraging the needs of artists and designers while maintaining the ability to dynamically update the device profile settings. A new, broader business program is built on a

deep partnership with Adobe. These plans include the expansion of the Creative Cloud library, and offer a new subscription model that includes additional capabilities and services. iOS 12 and iPadOS 12 will include an iOS Books app.

The app will include support for Volume Purchases, a new payment model for books on iOS that offer unlimited on-demand access to a library of books.

By purchasing a book, users will get a series of books for renewal with each renewal, similar to how movies are purchased and renewed on iTunes. For more details visit Adobe Books .
