## Portable IMAPSize

Portable IMAPSize is a lightweight application that allows users to manage their IMAP email accounts from a clean and straightforward layout. Since this is a portable version, it is important to mention that the program doesn't leave any traces in the Windows Registry, and you can copy it on any USB flash drive or other devices, and take it with you whenever you need to check your IMAP email

accounts. A new account can be added by specifying the account name, username, password, server, port number, SSL, smart inbox mode and spam handle. Not only does the program allow users to create multiple accounts, but you can also check the size of each email account pretty easily. The size information can be exported to a CSV file. When it comes to managing the messages from your mailboxes, this cross-platform tool packs all the necessary features that

you'd expect to be comprised in any similar applications. You are allowed to perform several actions, namely to create, delete and rename messages, change flags, and copy messages from one IMAP account to another. Portable IMAPSize provides details about the total number of messages and folder size, along with data about each email, such as subject, date, size, spam score and others. It also features a built-in search engine, and offers users the

possibility of creating account backups, sort the mailboxes by size, keep a log file with basic or detailed information about the process and possible errors, and download or upload messages to or from MBOX and EML files. You can also delete or save the attachments locally. All in all, Portable IMAPSize provides a clean layout and many useful features for helping you manage your IMAP accounts quickly and easily. Portable HMAILER - HMAILER Portable

is a free, universal mail client with an easy-to-use interface, integrated spam filter, and support for all major e-mail protocols. HMAILER can scan mail and store attachments locally, and it supports a variety of features and settings, which include support for task lists, web shortcuts, emoticons, email filtering, and other various options.
