I still can't believe I made 2D vector as my main graphic design background. I don't know why, but it just never occurred to me to get into it. As I've said, I'm not naturally good at illustration, so it didn't occur to me that I'd have to teach myself. What fools us designers! I'd like to think I have a degree of insight into the kinds of illustration that I'd like to do. But the idea of spending a very long time learning how to draw still terrifies me. Then I thought 'Why not become a 2D illustrator?' You know, just the answer for me. The only thing holding me back is the ordinary arrogance of 'I can't do that,' while completely forgetting that the same thing applies to any skill. I've been learning how to read and write for a couple of decades now, as if those are all-encompassing skills. Maybe there's more to graphic design than just the things I've mentioned so far. I'm sure there is because it's so much bigger than you think. I have to be open to learning more. With so many features and power that Aperture does not offer, this is just a great all-around program to manage your digital photos.

Personally, I love to use it as a power-user tool, to make the tedious work of tweaking and retouching photos easier and more accurate. It's honestly the most efficient way to take a series of photos, apply a bunch of filters, and send them on their way.

Now, with Share for Review, a growing number of users will be inspired to tell their stories and bring lighting into the 21st century." **Browser Experience**– The browser experience has been a weak point for desktop app users wishing to edit and share for review. With the release of Photoshop CC 2018 and Premiere Clip, users can now leverage their web-based applications to edit RAW files and natively output clips to YouTube, Adobe Stock, Creative Cloud Libraries and even other broadcast applications with a single click. "From a content and workflow standpoint, the biggest visual effect people are going to be mining from the MAX show is the ability to use the web's native editing system instead of relying on plug-ins," said Bill Hindry, VP Product Development, Adobe. "From an Adobe perspective, here is leverage for the three desktop apps we have in the stable, like Premiere Clip, to start planning how to take advantage of this workflows experience. We have a lot to do on it, but I'm thrilled that our marketing team is finding success with the launch of the new Creative Cloud brand."
